

Princeton City Schools COVID-19 Decision Tree

Sick Person Flow Chart

Princeton City Schools has worked closely with Hamilton County Public Health and the Springdale Health Departments to understand the decision points for handling suspected and confirmed cases of COVID-19 in our schools. Below is a decision tree based on information that the district recently received from the Hamilton County Public Health COVID-19 Schools Guidance document. In alignment with CDC guidance, schools experiencing a case of COVID-19 should assess the risk of transmission to other students when determining steps for school/classroom closures. The area(s) identified from this assessment (ranging from a classroom to the entire facility) are recommended to be closed for a minimum of 2 days in order to put a safety plan in place, perform contact tracing, and deep clean the facility. An alternative is to identify another location to move the students and teachers to continue learning. Deep thorough cleaning of the classroom/bus over the 2 days will be done. Notification regarding the positive case could take place a week later so deep cleaning will occur every night.

*Hamilton County Public Health Department will determine close contacts in conjunction with district Point of Contact
